

L

RECRUITER DOSSIER

Loic Hazoume

Founder-built full stack developer with product memory, production reps, and end-to-end delivery across client work, venture systems, and flagship product execution.

CURRENT FOCUS

Full stack, frontend, or backend engineering roles with meaningful ownership.

LOCATION

Canada · open to remote and on-site opportunities.

CORE STACK

TypeScript, React, Node.js, Python, Express, REST APIs, OAuth 2.0.

WHAT MAKES HIM DIFFERENT

Founder urgency + engineering adaptability.

Support-minded, used to discovery, implementation, debugging, deployment, and iteration under real constraints.

EMAIL

FAST HIRING SIGNAL

A recruiter-facing one-pager built to scan in under two minutes.

FORWARD-READY PDF

Loic has shipped more than 30 production websites and web applications across SaaS, services, education, insurance, branding, and founder-led product work. His signal is not only that he can code, but that he can operate across product definition, implementation, API integration, debugging, deployment, and refinement.

FLAGSHIP PRODUCT

DomainEx.app proves real full-stack range.

DomainEx is an AI-powered ad intelligence platform built with a React and TypeScript frontend plus Node.js and Python backend services.

- Meta Graph API and TikTok Marketing API integrations through OAuth 2.0.
- Recurring sync workflows and real operational data movement.
- Architecture thinking, auth handling, product design, and execution in one system.

PRODUCTION PROOF

30+

Launches across client delivery, venture builds, and internal product development.

VENTURE SYSTEMS

9

Connected WXZA products spanning finance, cybersecurity, XR, monitoring, and prototyping.

WORK STYLE

End-to-end

Discovery, design, implementation, deployment, maintenance, and iteration under pressure.

ROLE FIT

Strong fit for product-minded engineering teams.

- **Full Stack Engineer:** Owns interface, backend logic, auth, APIs, and delivery from end to end.
- **Frontend Engineer:** Brings product taste and translates complexity into usable experiences.
- **Backend Engineer:** Comfortable with APIs, data flows, auth logic, and systems behavior.
- **Startup Engineer:** Operates well under ambiguity, speed, and founder-level responsibility.

Best environments: teams that value ownership, code review, product quality, and builders who understand both implementation and decision-making.
